

5.4 NetBox Software Version 5.4 for NetBox, NetBox VRx and NetBox VR Series Products

NetBox™ access control software version 5.4 introduces new tools that streamline system configuration and deployment, making the system easier to install and use. The release also provides Mobile Security User™ app support for international users as well as security updates.

Portal Builder

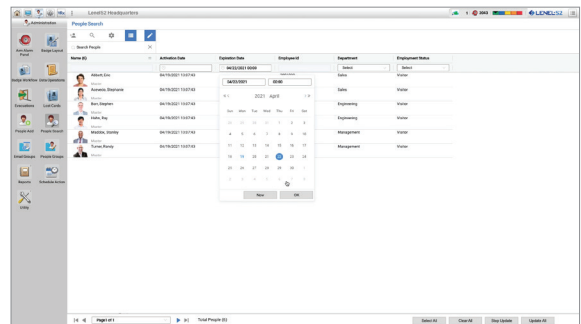

The Portal Builder tool allows NetBox portals to be planned and set up prior to deployment of Network Nodes, saving time during onsite installations. Portal Builder enables comprehensive portal customization with resources such as readers, request to exit devices, door status modules and more. Value-added resellers and administrators can create portal templates as well as export, import and email portal configurations.

With Portal Builder, value-added resellers and administrators can quickly provision NetBox hardware with complex configurations in the field.

Bulk Person Modification

Bulk Person Modification simplifies the process of updating any quantity of visible person records. Administrators can quickly search for and filter records by cardholder criteria, and select records to modify them simultaneously. Color-coded system feedback lets administrators know whether a record modification was successful.

Bulk Person Modification makes it possible to simultaneously update groups of person records.

Mobile Security User App Support for International Users

The Mobile Security User app is now supported outside of North America. With the app, employees can receive notifications from security personnel, utilize their phone as an HID mobile credential, share crowdsourced media, raise threat levels and self muster during an evacuation event. The Mobile Security User app is available for iOS® and Android®.

Security Updates

Version 5.4 security-related updates include enhanced SSL configuration, an updated login screen recommending the use of HTTPS and a new Network Settings page which allows network setup to be completed from a single location. A new Security Checklist Report helps administrators assess the status of properties that affect system security such as password strength, secure web browser communications and backup health.

Version 5.4 supports NetVR™ and NetBox VR systems version 20.09.8 and earlier, VRx™ and NetBox VRx systems version 5.4 and NetBox Global system version 2.17. This document describes only some of the release's capabilities.

The following LenelS2 hardware is eligible for upgrade to version 5.4 and later:

- NetBox Enterprise 50/100
- NetBox
- NetBox Extreme
- NetBox VRx
- NetBox VR
- NetBox VRx Quatro
- NetBox VR Quatro

If you have traditional LenelS2 hardware that is not listed here or are not sure how to identify your hardware, please log in to Support Central and view the *Forward!* Traditional Hardware Identifier on any NetBox Series Support Page.
